MEMORANDUM FOR: Director of Central Intelligence

SUBJECT: FMSAC Advisory Panel

1. It is recommended that an advisory panel be established for the Foreign Missile and Space Analysis Center. The panel would meet periodically to review the analysis techniques in use. Membership on the panel should include specialists in each of the scientific disciplines involved in missile and space collection and analysis. These specialists would assure that FMSAC was making maximum use of the advances made in the research, industrial, and Governmental facilities. Since a number of the panel members have at least indirect association with other members of the Intelligence Community, they should also be of value in establishing an understanding of the mission and capabilities of the FMSAC.
